Regarding Chalit Chart

- Chalit Chart is only related to houses.
- The planets remain in same zodiac as in D1 or Birth chart. Zodiac and the longitude of the planet never changes. If a planet "A" is in a zodiac owned by an enemy planet then A remains weak no matter which house results this planet "A" may give. In above example Sun and Saturn both are in Capricorn and both are giving results of 2nd house (house owned by Jupiter) while in D1 they seem to be in 3rd house. Here Sun is weak since it is in Capricorn. We have to see how this weak Sun will give results of 2nd house.
- **Aspects** : A planet aspects should be seen in terms of its longitude and then we must refer Chalit table to see which house the planet is aspecting. In above example Saturn is 16°28' in Capricorn. It would be aspecting at 16°28' Pisces, 16°28' Cancer and 16°28' Libra. Now we can see these points are falling in which house as per chalit table. Of course wherever Saturn's aspect is falling it will have influence 10degrees on either side.
