22nd Drekkana

- **Method of calculating 22nd Drekkana** : There are 36 Drekkanas; 3 for each of the 12 Rashis. From the Lagna Drekkana in your horoscope, count successively till the 22nd Drekkana. For example if your Lagna is in the first 10 degrees you are born in the first Drekkana. From that count the number of Drekkanas for each Rashi. So, in this case, the 22nd Drekkana will be the 1st Drekkana of the 8th house for your horoscope; if your birth lagna is in the second Drekkana i.e. between 10 and 20 deg. of a sign, the 22nd Drekkana will fall in the 2nd Drekkana of the 8th sign; if your birth is in the third Drekkana, the 22nd Drekkana will be in the 3rd Drekkana of the 8th sign from your Lagna. The 22nd Drekkana is also called the “Niryaana Drekkana” There are various methods of counting 22nd Drekkana, but a short cut technique is to look for the lord of 8th house in D-3. That planet would be lord of 22nd Drekkana for your chart.
- As it is calculated from lagna, it brings harm of physical nature. - the placement of kharesh from lagna in the drekkana chart shows inner turmoil, struggle related to disease, debt or enemies.
- Brihat Parashara Hora Shastra states that in natal astrology, the **nature of the 22nd Drekkana indicates the source/ manner of death.** - In general condition when Longevity has not reached optimum it is concerned with bodily discomfort, health matters, and threat to longevity of the native. Some of the special effects are as follows:

Transiting 22nd drekkana

- Ayudha Drekkana indicates injury with weapons as cause of death / accidents, and so on.
- Sarpa Drekkana can mean danger from poisonous reptiles that could be life threatening.
- Dasha/Bhukti of lord of 22nd Drekkana generally afflicts native's health and yield mental agony, when devoid of benefic aspects.

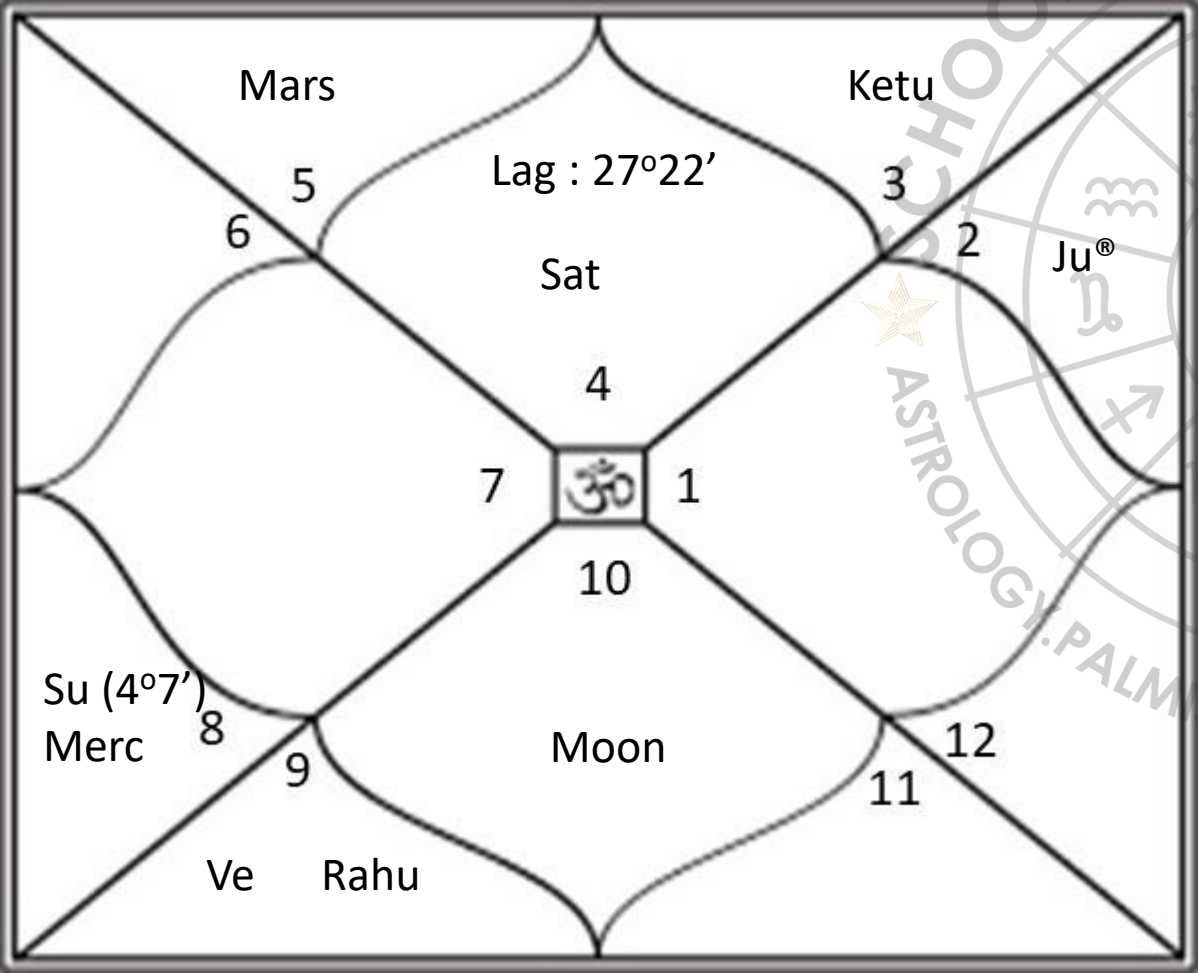

If the concerned planet is also a natural malefic and posited in malefic Sign then intensity of evil would definitely be higher than expected.

- Whenever lord of Lagna transits the 22nd Drekkana, loss, bodily discomfort, grief and quarrel results.
- In a similar fashion transit of lord of 22nd Drekkana in ascendant produces trouble regarding significance of 1st house.
- Like ascendant, obtain 22nd Drekkanas of other planets specially Moon and Sun. Transit of that planet into respective 22nd Drekkana always mar the significance of planet transited.
- Avoid starting any new task when your luminaries are transiting their 22nd Drekkana or/and Khareesh moving over Sun or Moon

- When lord of 8th house is placed in lagna in birth chart, then the mutual dasha period of lord of 8th house and that of lord of 22nd drekkana gives humiliation and loss of position.
- The intensity of malefic result depends upon the affliction to the 22nd drekkana lord.

The seriousness is greatest when in birth chart the following conditions are present

5. If in the same manner, if benefic planets are related with third house in any manner or 3rd lord makes a relationship with the third house, probability of siblings will be very high.

Number of Siblings

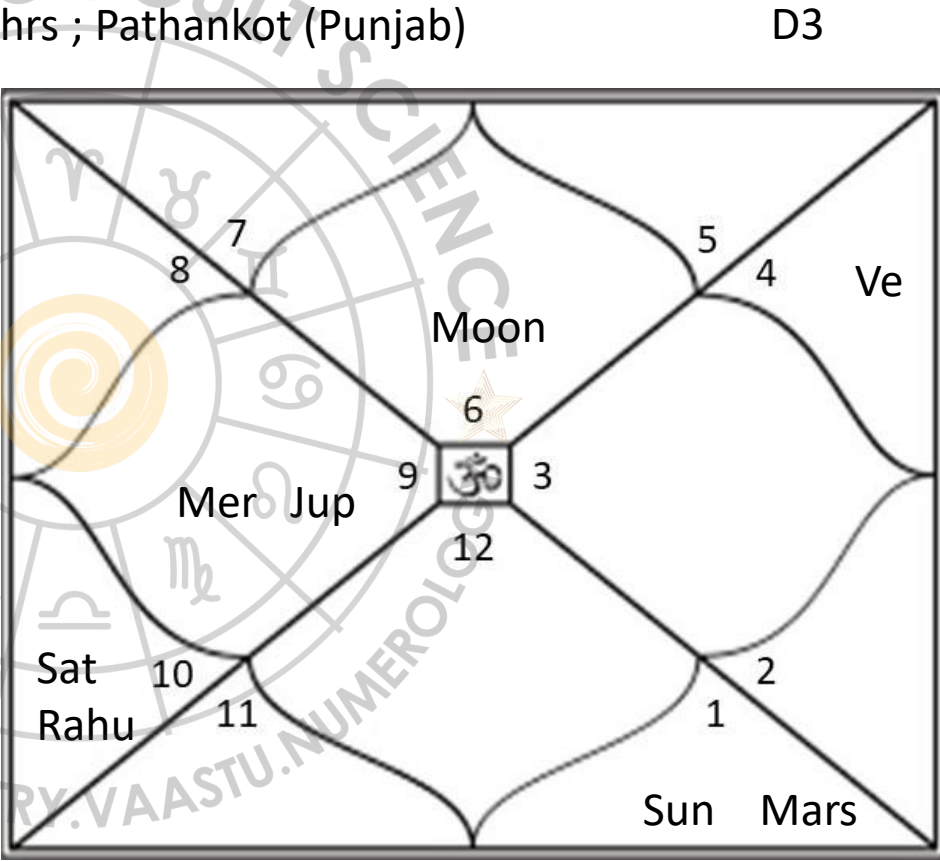

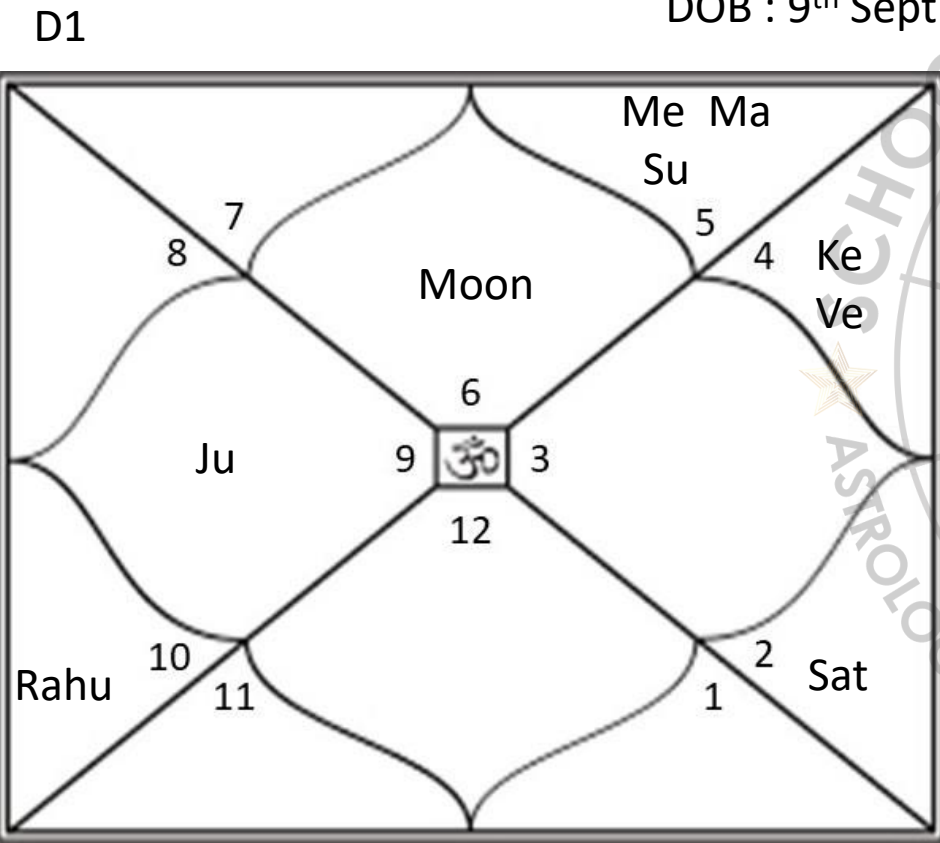

- The classics of Hindu astrology have given number of yogas which tells us about the prospects of happiness or unhappiness from our brother-sisters. In texts like Saravali and Sarvath Chintamani some astrological combinations have been given which can be used to predict the number siblings a native may have. As per these classics the number of siblings can be find out by counting the Navamshas gained by the 3rd lord.
- Some Hindu astrology text also suggests using Bhinashtakavarga of Mars for counting the number of co-borns. As per these texts the number of rekhas gained by Mars in its Bhinashtakavarga tells about the number of brother-sisters a native may have.

Dreshkana or Drekkana method :

- a) First of all note down the Sign of the lagna lord of D3 chart. The number of sibling could be equivalent to the numeric number of Sign, example- Dreshkana is Aquarius and its lord Saturn is in Cancer (rashi number 4) so the native may be among the total 4 siblings (Brother/Sisters). Secondly if the lord of Dreshkana lagna is in a rashi with higher numerical number like say it is in Capricorn (number 10) or Scorpio (number 8) than count up to the Mooltrikona rashi of Dreshkana lagna lord to ascertain the number of siblings. Example- Dreshkana is Pisces and its lord Jupiter is in Aquarius (number 11) than counting up to Mooltrikona rashi of Jupiter, which is Sagittarius, gives us number 3. So native may be among total 3 siblings.
- b) The second method is to count the number of planets that comes between the Dreshkana lagna and Mars (which is the karaka of co-borns). In this method we will have to superimpose the degree of lagna and planets in the Dreshkana chart to judge the exact number of planets that comes between the Dreshkana lagna and Mars as sometimes it may happen that there may be some planets in the lagna of Dreshkana and/or in conjoined with the Mars.

Lag	Sun	Moon	Mars	Mercury	Jupiter	Venus	Saturn	Rahu

Analysis of Chart 3

- The native was born with the balance dasha of Sun. Both Mars and Saturn are giving aspect to the third house showing the probability of being a younger among co-borns (as both these planets destroyed the third house's karaka tattvas).
- **First Method** : Now see the Dreshkaan which has Virgo sign rising with its lord Mercury placed in Sagittarius rashi. The Sagittarius is number 9. This is too big number for number of siblings. So from Sagittarius now count up to the Virgo which is the Mooltrikona sign of Mercury. It will give us the number 4. This method indicates 4 siblings.
- **Second Method** : See how many planets are between the ascendant of Dreskana and the Mars. For this superimpose the degrees of planets and ascendant from the Rashi chart there. See with lagna having 07degrees 40 minutes and Moon is having 08 degrees 43 minutes the Moon is ahead from the lagna degrees. Also notice that Sun has cross the Mars in degrees so there are total 4 planets between lagna of Dreskana and Mars. We have not taken the Rahu/Ketu in the planets for the reason that they are shadow planets only.
- Number of siblings of this native were 4 with one sibling died

Chart 4

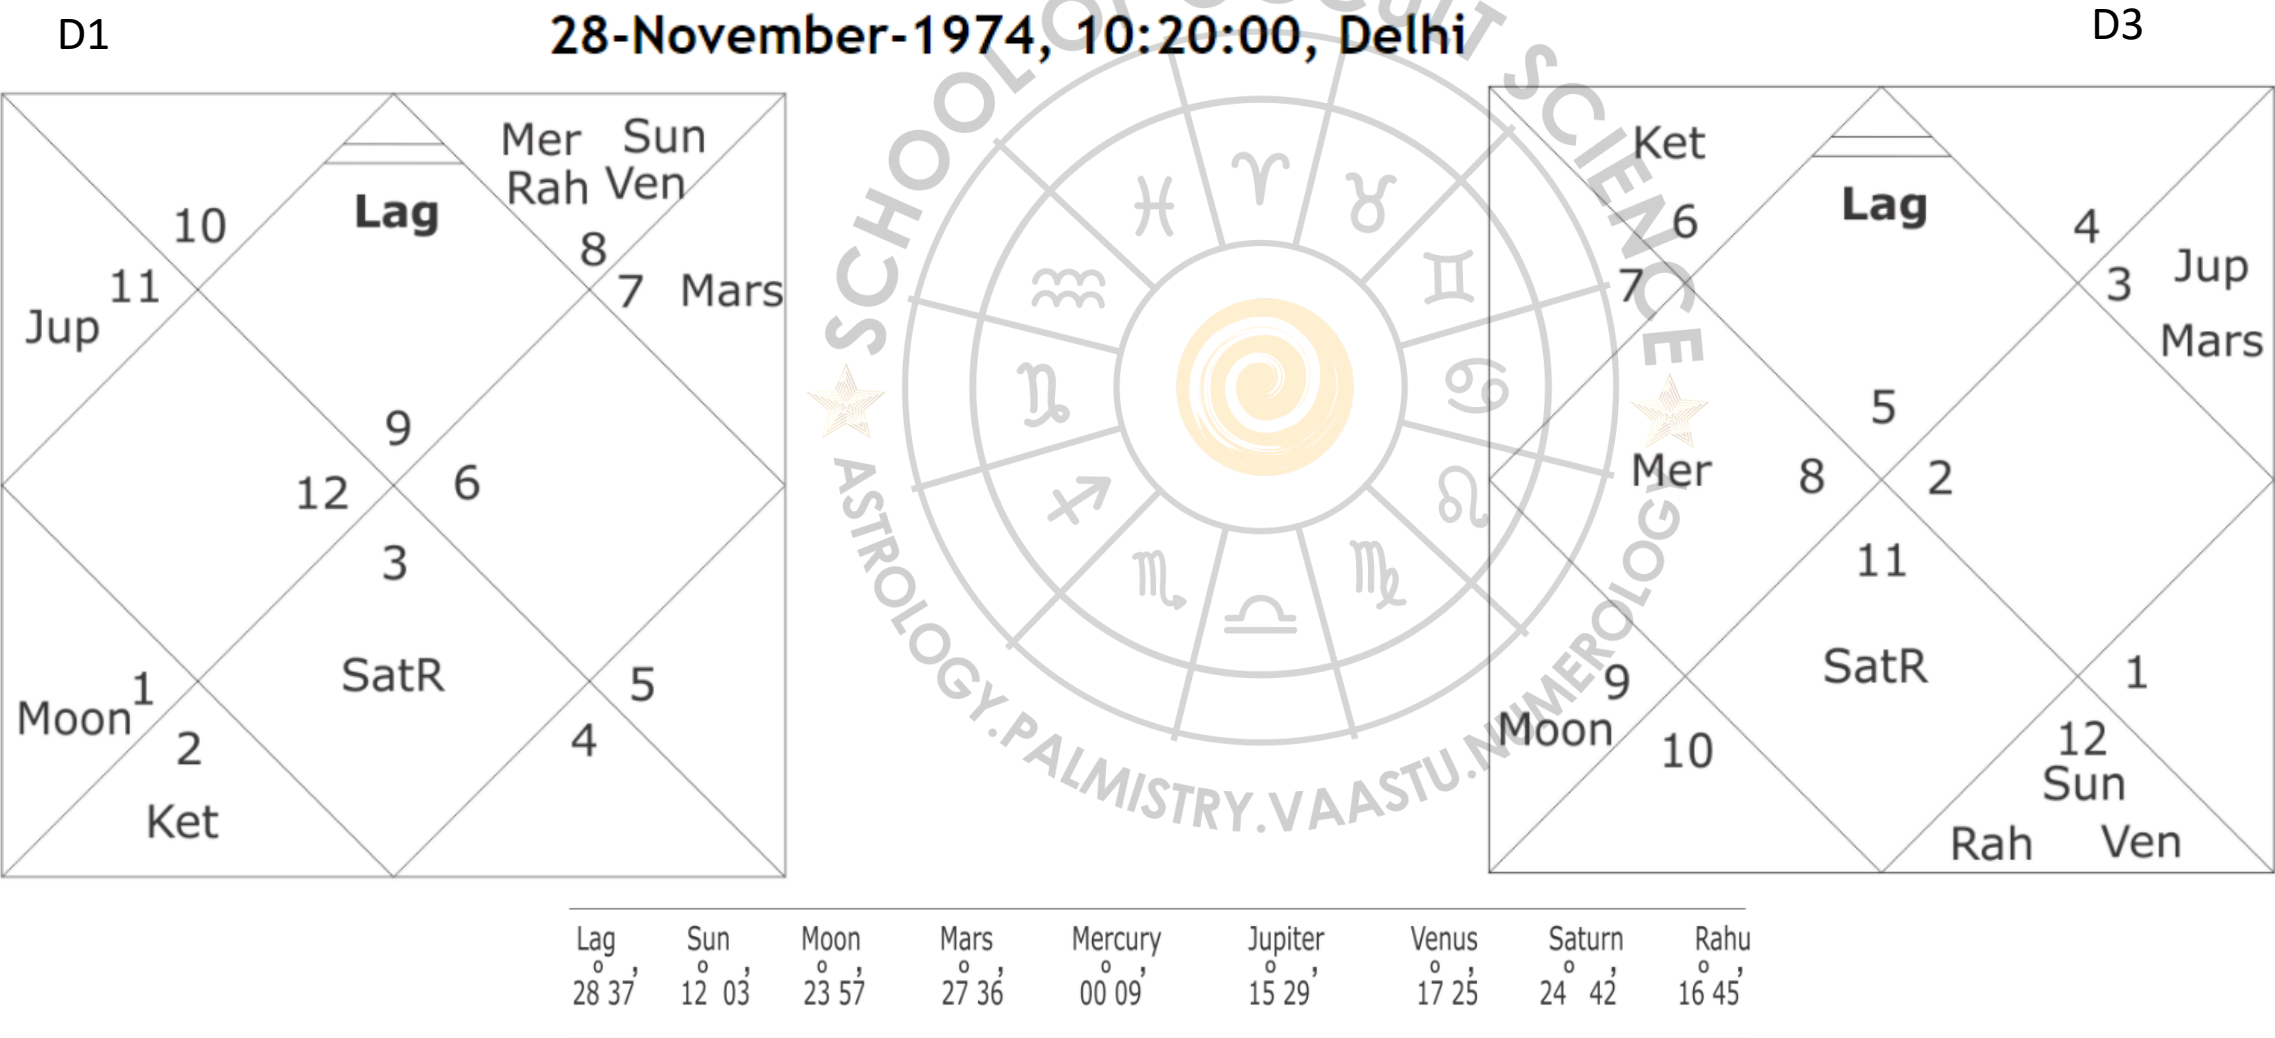

Chart 4 - Analysis

- Balance dasha at birth : Venus 4Yr 0M 18d

Venus is afflicted in 12th house with no relationship with 3rd house / lord or significator Mars.

- In D3 Lagna lord Sun is in Pisces. Its mooltrikone zodiac is Leo which is 6 places away.
- Number of planets between lagna and Mars are also 6 (not considering Rahu / Ketu and longitude of Jupiter is less than Mars.)
- This person indeed were 6 siblings.

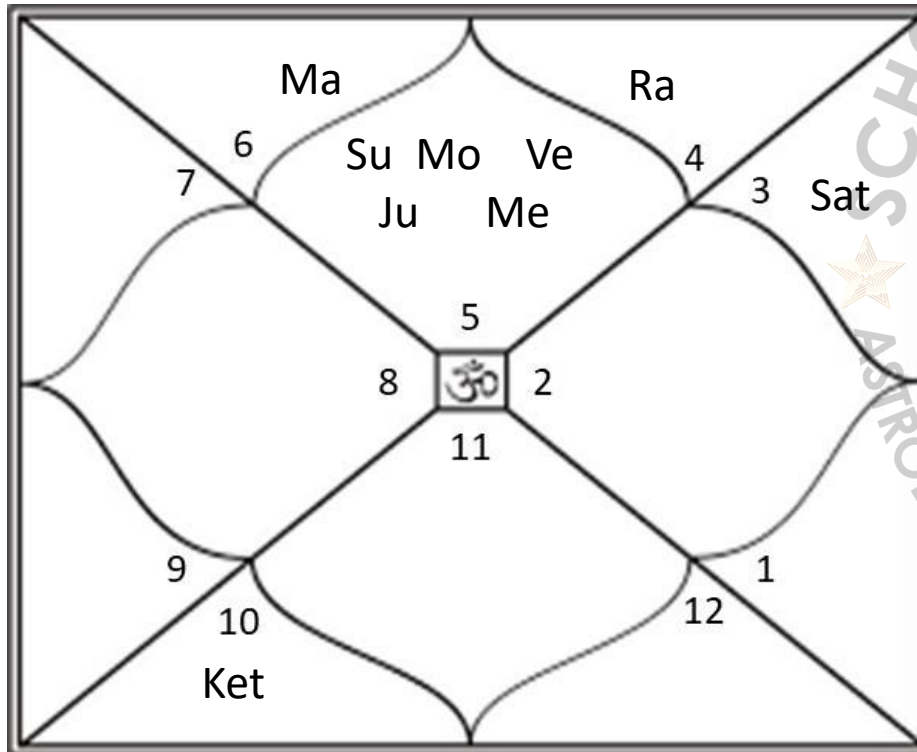

Sex of Coborn

- Sarvartha chintamani gives a method to determine gender of sibling in D3 chart. Male signs are Aries, Leo, Libra, Sagittarius, Cancer and Scorpio. Female signs are Taurus, Virgo, Capricorn, Pisces, Gemini and Aquarius. This is different from odd signs being males and even signs being females.
- Check the lord of 3rd for younger sibling and lord of 11 for immediate elder sibling. 5th for next younger and 9th for next elder and so on. See the sign it is placed and influences of planets and determine the gender.
- The male planets are Sun, Mars, Jupiter, Rahu and any planet in exaltation.
- The female planets are Moon, Venus, Ketu and any planet in debilitation.
- Saturn and Mercury are eunuch planets, but they have found to indicate female and male children respectively.
- When any planet is retrograde, it changes its sex i.e. male turns to female and vice versa
- When a planet is singly placed in a sign and the sex of sign and planet is different then the sex indicated by sign is important. Then comes the aspect on the planet.
